INNOVATION /

MANUFACTURING

STEP A : Pre-treating the surface of the door or window to be ready for painting.

STEP B : Molding the fiberglass to shape the door or window. Resin-covered fiberglass. The physical and mechanical properties of fiberglass are excellent due to low thermal conductivity, resistance to mildew, corrosion, dimensional stability under various temperatures and life span.

STEP C: Cutting of doors or windows.

THE COLORS

THE COLORS GIVES ELEGANCE!

We are proud to offer you a high-performance architectural finish, available in 189 stock colors, and the possibility of any custom-match color : it is the powder coating process.

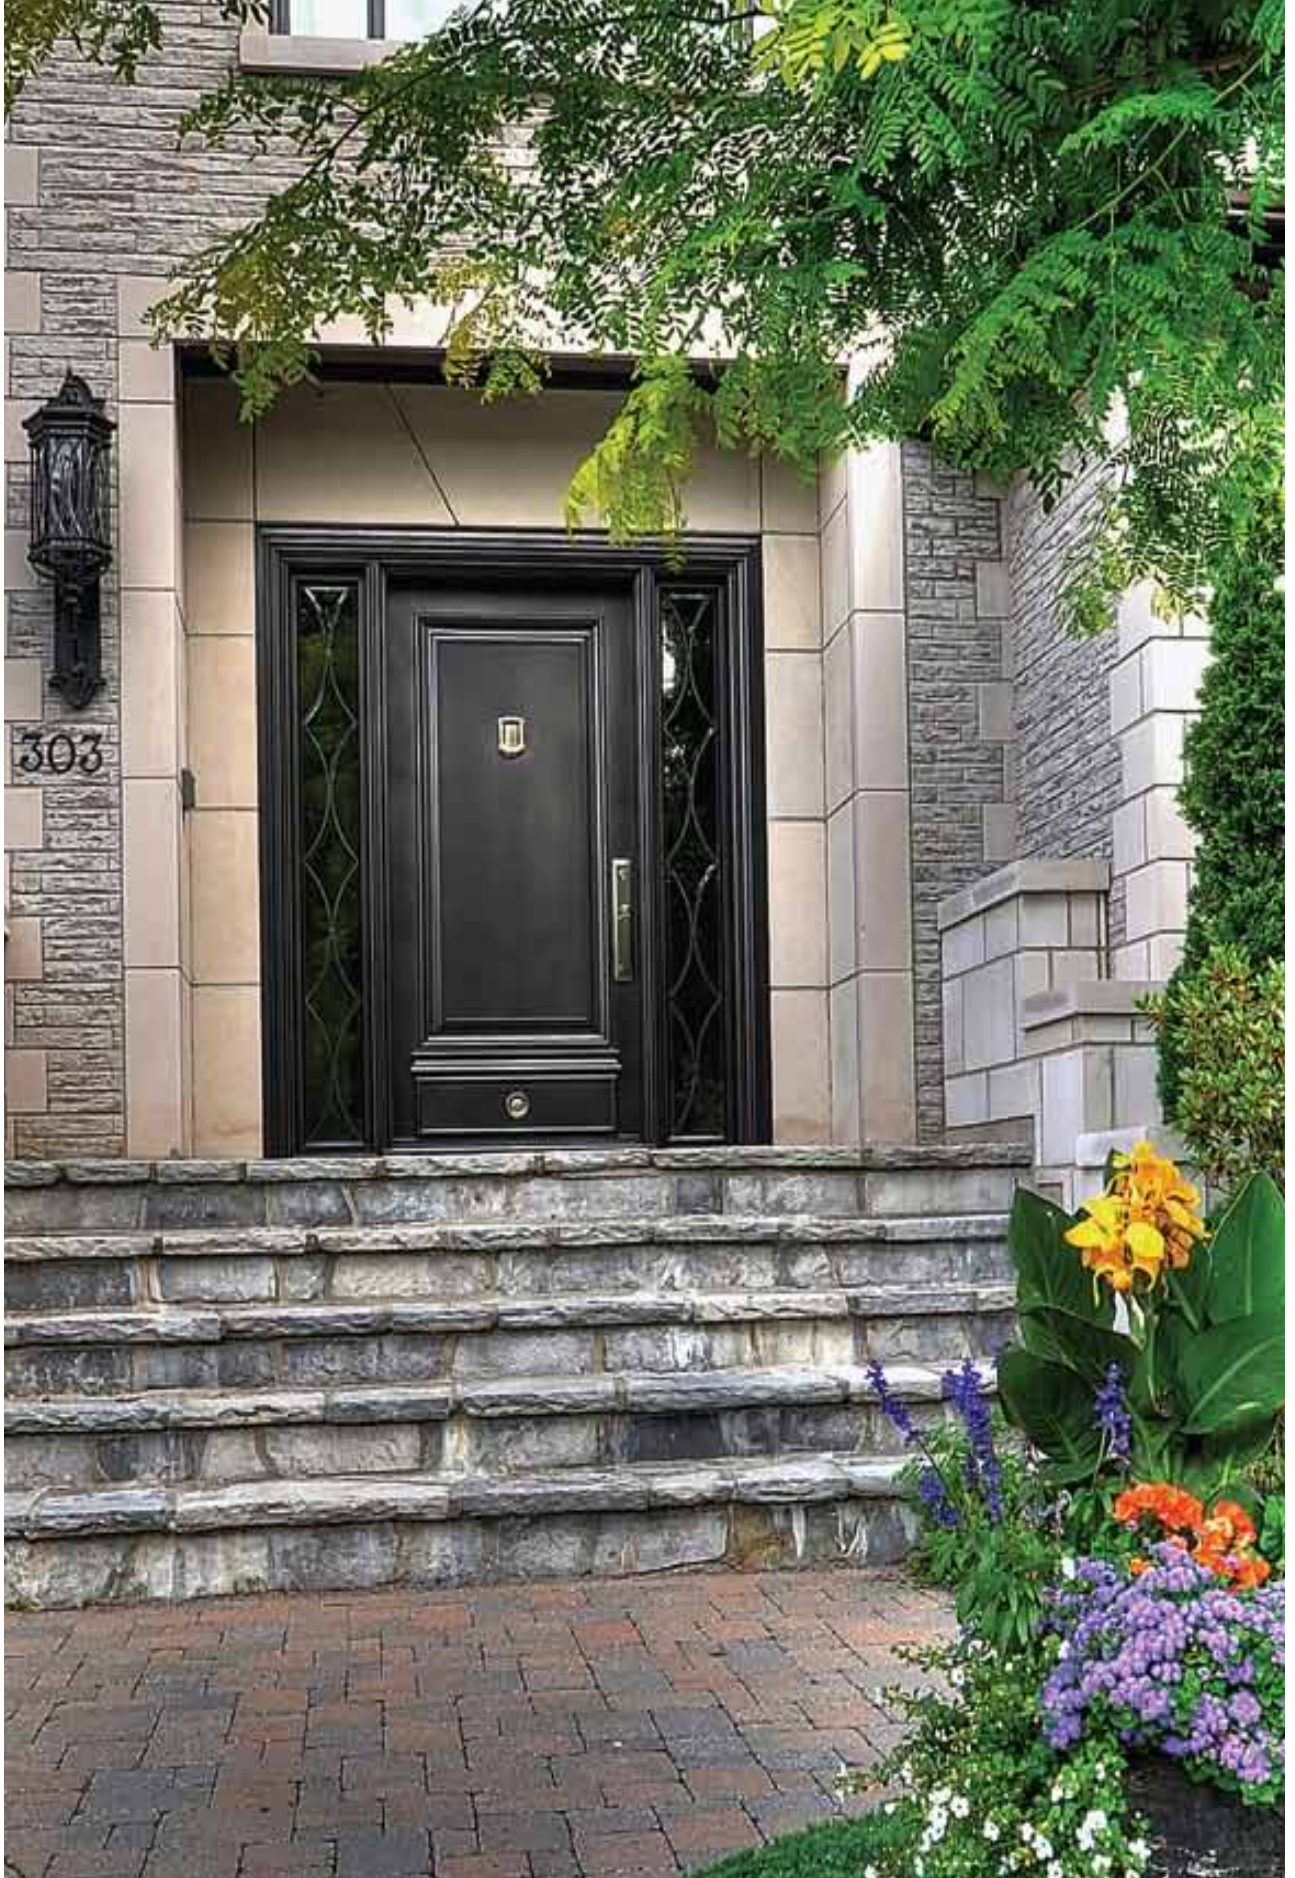

Specifically formulated for use on architectural aluminum components, and offering you a high quality finish with outstanding weatherability, it is the only finishing technology 100% environmentally-friendly.

Our seven-stage pretreatment of the surfaces, each step meticulously monitored, offers you a quality that has already passed the test of time. The process is offered in two high-performance series that meet the requirement of the world's most demanding architectural specifications.
